Requirements Management

Wisereach Masterclass - Synopsis

Requirements Management

Session content

1 introduction to requirements management

We explore why you need requirements and the common issues faced when gathering them. We also take a look at [how requirements management relates to different types of project delivery methods](#).

2 analysing and organising requirements

In this section we look at alternative ways of expressing and recording requirements including [mind maps and user stories](#). We also cover the importance of requirements prioritisation.

3 try-it-out session

This is a practical session where we practice extracting requirements from a business document. We'll explore the [challenges and traps](#) that you might face.

4 managing requirements throughout a project

Finally we will look at how requirements are managed throughout a project; how they might be 'traded' for new ones; who owns them; and [what to do when they are 'wrong'](#).

Session style

We aim to make this masterclass informative and interactive.

It will be led by an experienced Wisereach requirements specialist who has seen the best and worst of requirements management.

We will create an environment where there is time to think about how requirements management currently works in your organisation and help align the tools and techniques to your own particular challenges.

We hope that you will find the session is both informative and enjoyable.
